

# TrueCommerce EDI Sales Integration for Microsoft Dynamics NAV

A Microsoft Certified, embedded NAV integration delivered as a managed service for optimal efficiency, improved productivity and faster time to value

## BENEFITS

- ▶ Embedded NAV user experience puts EDI processing in the hands of business users, reducing the impact on IT and EDI specialists
- ▶ Eliminate manual entry errors by fully automating the exchange of EDI documents
- ▶ Optimize and streamline operations by deploying manage-by-exception strategies
- ▶ More than 10,000 companies improve business productivity daily with the TrueCommerce Trading Network
- ▶ No annual contracts, no maintenance fees and no extra charge for support incidents or changes to trading partner maps

**Eliminate manual tasks and accelerate the order-to-cash cycle while gaining seamless EDI connectivity to key trading partners with this Microsoft Certified, single-vendor solution.**

TrueCommerce EDI for Microsoft Dynamics NAV combines an embedded EDI module built exclusively for NAV with seamless, web-based connectivity to the fast-growing TrueCommerce Trading Network. Delivered as a managed service, TrueCommerce EDI for Dynamics NAV lets you comply with any trading partners' EDI requirements, and offers limitless expansion of your network over one robust and affordable connection.

This seamless integration supports automated customer workflows including inbound sales orders, outbound sales invoices and outbound sales order acknowledgements, as well as advance ship notices (ASNs)—eliminating manual tasks while delivering full visibility of transactions throughout their lifecycle. Additionally, you can automate your warehouse communications including warehouse shipping orders and advices to help streamline your order fulfillment process.

TrueCommerce manages your setup, trading partner mappings, NAV integration and trading partner connectivity. The solution validates each EDI transaction using NAV's business logic, and notifies you of discrepancies with unit pricing, duplicate purchase order numbers and more. These built-in safeguards help eliminate chargebacks and optimize turnaround time on orders by ensuring that all EDI documents are complete and accurate.

With its embedded architecture, TrueCommerce EDI for NAV also offers the flexibility to accommodate customizations and changes to your NAV environment, so that no recoding is required to implement our solution. Support for NAV 2009 and newer ensures upgrade flexibility, while support for multiple EDI standards as well as XML lets you meet diverse partner demands. Scalable multi-company and multi-user access support enterprise EDI requirements.

## KEY FEATURES AND BENEFITS

### Comprehensive support for EDI documents

- Inbound sales orders, outbound sales invoices, outbound order acknowledgements and outbound ASNs move seamlessly between the embedded EDI module and NAV.
- Invoice integration includes support for credits and debits, along with the ability to quickly re-process invoices.
- Order acknowledgement integration supports header level order acknowledgements, and can determine reporting backorder status based on inventory availability.
- ASN integration supports no pack, pick and pack (package/carton), standard (package/carton), pick and pack pallet (tare/pallet), standard pallet (tare/pallet) and item contents; and automatically creates GS1/SSCC container numbers.
- ASN shipment automation capabilities let you auto-pack by pure carton or mixed carton, along with the ability to auto-pack multiple ASNs.

### Leverage your NAV business logic for a seamless order-to-cash process

- TrueCommerce EDI validates EDI documents (e.g., price validation and other order process controls) using NAV's business logic, so no EDI-specific customizations are required when NAV is extended.

- The embedded TrueCommerce EDI module extends NAV rather than modifying it, helping to ensure predictable upgrades and compatibility with other NAV modules.
- TrueCommerce EDI stores turnaround data within its NAV integration tables to help eliminate the need to add custom fields to core NAV tables.
- Customers can leverage the NAV job scheduler to assist in automating EDI workflows.
- Integrated inbound warehouse shipping advices (945) automatically create a ship notice in Dynamics NAV, which includes the package and pallet details as well as UCC-128 label details for faster, more accurate order fulfillment. This added layer, not native to Dynamics NAV, allows for the automated flow of all shipping information from the 3PL to the customer.
- Configuration controls allow the user to set preferences for automated processing. Quantity shortage options allow users to define how shortages will be handled, such as when to backorder or cancel. An option to automatically create an invoice based on the incoming 945 allows the user to streamline processes.

### Warehouse Integration Automates Your Communications with 3PL Providers

- Integrates outbound warehouse shipping orders (940), which can be processed automatically from a sales order in Dynamics NAV.
- Create logic, leveraging native Dynamics NAV functionality to help track any order fulfillment challenges referenced from the warehouse shipping advice (i.e., back-orders).

## ABOUT TRUECOMMERCE

TrueCommerce revolutionizes trading partner connectivity, visibility, and collaboration by linking suppliers, retail hubs and end consumers in one global commerce network. From the factory to the warehouse, from distributor to retail storefront, achieve new levels of business connectivity and performance with the world's most complete commerce network.

Connect. Integrate. Accelerate.
