

# TRUECOMMERCE EMBEDDED EDI FOR MICROSOFT DYNAMICS AX

## BENEFITS

- ▶ As trading partners compliance requirements change, TrueCommerce EDI provides mapping updates free of charge
- ▶ Optimize and streamline operations by deploying management by exception strategies
- ▶ Embedded AX experience brings EDI processing into the business users' hands rather than IT managing and passing along
- ▶ More than 10,000 companies improve business productivity daily with the TrueCommerce Trading Network

## FAMILIAR AX LOOK AND FEEL MINIMIZES TIME TO PRODUCTIVITY AND ENHANCES UTILITY

Built exclusively for Microsoft Dynamics AX, HighJump TrueCommerce provides the highest level of flexibility as it relates to EDI document integration, accommodating your unique AX environment, and scaling with your business. When working with Microsoft to design our solution, we applied their best of breed approach for high volume throughput allowing for multi-threaded processing versus the linear approach of using standard AIF web services.

TrueCommerce offers a truly embedded EDI solution, feeling just like native AX, your team will find it easy to implement and will experience a much faster learning curve. Leveraging the familiar and easy-to-use interface for defining business rules allows users of varying skill levels to manage the overall solution.

TrueCommerce also provides the depth and flexibility to accommodate for modifications to your AX environment. Our product design ensures that any customizations made to your system such as the addition of web services, new fields and new workflows does not require reprogramming of your mission critical EDI system.

## CONFIGURABLE BUSINESS RULES ENHANCE PROCESSING SPEED AND ACCURACY

Configure business rules and cross references to set up "If...then" rules, or to tell the system when to flag orders for discrepancies such as price variances. The TrueCommerce EDI solution provides intuitive cross references which are user-defined to alert you when specific business conditions occur such as drop ship orders, minimum order not met, etc.

System, Company or Customer level rules can be configured by order type, item, by document, by ship-to location, and more.

Our design minimizes the ongoing and arduous task of maintaining compliance with your trading partners. Inventory and unit of measure conversions, business rules, date manipulations and much more can be defaulted at a system or company level or defined at a customer level for the ultimate level of granularity.

### SCALABLE INVESTMENT CURBS COSTS AS YOUR BUSINESS CONTINUES TO GROW

The TrueCommerce technical architecture was built for high volume transaction exchanges, storage and throughput by leveraging best-of-breed tools and technologies.

Scalability also implies that your EDI partner will be able to provide support and services as your business demands them. TrueCommerce doesn't charge for support incidents or mapping changes caused by modified trading partner requirements.

### INTEGRATED SHIPMENT PACKING AND ASN GENERATION

- Ensure compliance by driving consistent processes through configured business rules
- Order and pick list packing capabilities with peripheral device support for weight capture and pick n' pack item and quantity validation
- Use our powerful Auto-Pack feature or a wedge scanner to pack containers with mixed items

### ABOUT TRUECOMMERCE

TrueCommerce gives your business a competitive edge with simple, adaptable and cost-effective solutions that harness the power of our trading partner community. From the factory to the warehouse, from distributor to retail storefront, achieve new levels of business connectivity and performance from the world's most complete network.

**Connect. Integrate. Accelerate.**
