# Integrated EDI for Sage Intacct

**A modern EDI solution that automates sales, fulfillment, purchasing, and multichannel workflows in Sage Intacct.**

## **The Challenge: Manual Processes and Disconnected Systems Slow Fulfillment, Increase Errors, and Reduce Efficiency**

As businesses expand their supply chain operations, Sage Intacct users often struggle to manage growing volumes of orders, fulfillment tasks, supplier communications, and multichannel data. Without automated EDI integrated directly into Sage Intacct, teams are forced to rekey sales orders, shipment details, acknowledgments, and invoices, slowing operations and increasing the risk of costly errors. Issues like incorrect pricing, duplicated purchase orders, and missing shipment data can lead to delays, chargebacks, and strained relationships with key trading partners.

These challenges intensify for organizations working with 3PLs or managing complex fulfillment workflows, where inbound shipment documents must be processed manually and reconciled with existing records. As companies expand into marketplaces, online storefronts, and API-driven retail channels, the need for accurate, real-time data exchange becomes even more critical. Without automation, maintaining compliance, updating inventory feeds, and ensuring visibility across systems consumes valuable resources and limits scalability. Sage Intacct users need an integrated EDI approach that streamlines document exchange, improves accuracy, and supports growth.

## **Our Solution: A Complete, Cloud-based EDI Platform That Automates Every Sage Intacct Workflow**

TrueCommerce provides a cloud-based EDI solution that automates the exchange of sales, fulfillment, and purchasing documents directly within Sage Intacct. The platform simplifies the process by integrating connectivity, translation, data mapping, and dedicated support into a single, end-to-end solution. Intelligent modules format inbound transactions to match Sage Intacct configurations and align outbound documents with trading partner requirements—all while ensuring compliance as your network grows.

The integration streamlines order processing by automating sales orders, invoices, shipments, ASNs, and outbound inventory reporting. Purchasing workflows are improved through automated 850 purchase orders, 855 acknowledgements, and 856 ASNs received directly into Sage Intacct. For businesses working with 3PLs, inbound shipment documents automatically create shipments with package-level detail, while outbound ASNs can be generated from inbound data.

Built-in validation checks for missing fields, incorrect pricing, duplicate purchase orders, and item mismatches before transactions are sent. Cloud-based access reduces IT overhead with no maintenance or update responsibilities.

### Key Capabilities Include:

Automated integration for sales, fulfillment, and purchasing documents

Inbound shipment automation and outbound ASN creation

Validation safeguards that reduce errors and chargebacks

Cloud-based architecture with no maintenance needed

Dedicated support and continuous compliance monitoring

## Integrate Your Entire Supply Chain With Sage Intacct

TrueCommerce gives Sage Intacct users the ability to automate order fulfillment, purchasing, and supply chain operations with a fully integrated, cloud-based EDI solution. Sales workflows are streamlined with automated sales orders, invoices, advance ship notices, and outbound inventory reporting—reducing the need for manual rekeying and increasing operational accuracy. Purchasing teams can send and receive documents such as 850 purchase orders, 855 acknowledgments, and 856 ASNs directly into Sage Intacct, improving collaboration with suppliers.

For businesses working with 3PL partners, inbound EDI shipment documents automatically generate shipments within Sage Intacct, including package-level detail, serial numbers, and other key information. Outbound ASNs can also be created automatically from inbound shipment data, allowing businesses to meet retailer requirements more efficiently.

Built-in safeguards validate prices, PO numbers, item data, and required fields before any transaction is sent, helping eliminate costly chargebacks and improving customer satisfaction. Additional automation capabilities for labeling, packing list templates, integrations with marketplaces, storefronts, and API-driven retailers help Sage Intacct users expand and scale with confidence as demand grows across multiple channels.

## Why choose TrueCommerce's integrated EDI for Sage Intacct?

01

### Cloud-Based EDI

Access EDI anywhere with no maintenance, backups, or updates required.

02

### Automated Order Processing

Integrates sales orders, invoices, shipments, ASNs, and inventory reporting.

03

### Purchasing Integration

Send 850s and receive 855s and 856s directly into Sage Intacct.

04

### 3PL + Warehouse Automation

Create shipments from inbound EDI and automatically generate outbound ASNs.

05

### Built-In Safeguards

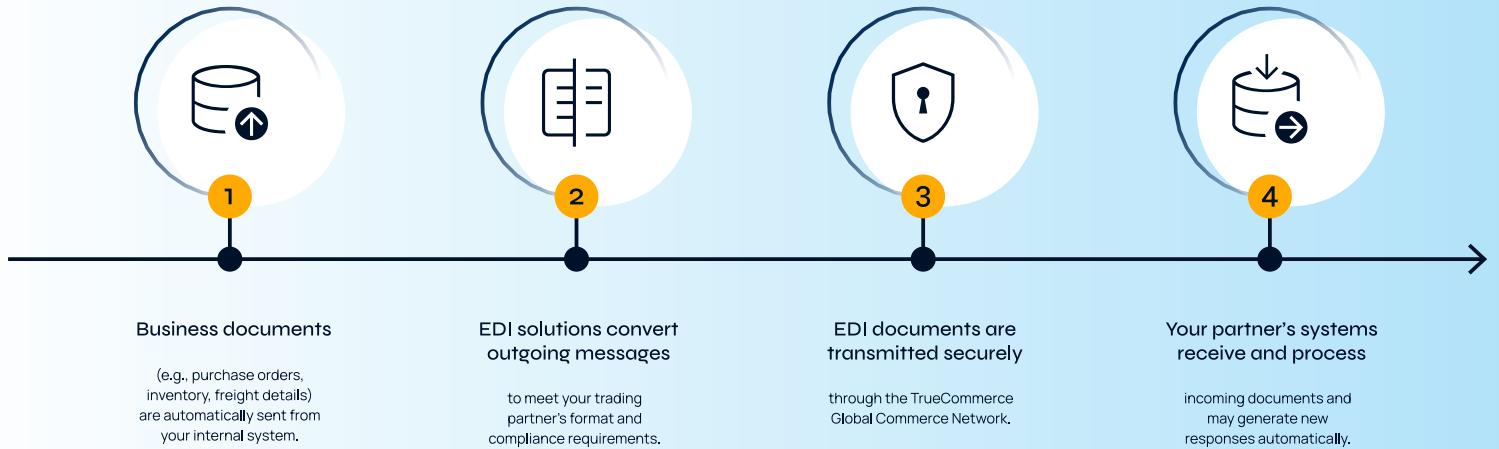

Validate pricing, PO numbers, items, and required fields to reduce errors.

06

### Multichannel Expansion

Connect to marketplaces, storefronts, and retailer APIs for real-time data exchange.

## How our EDI Platform Works

TrueCommerce enables Sage Intacct users to streamline supply chain communication, automate manual processes, and support omnichannel operations through a modern, cloud-based EDI platform. With deep integration across sales orders, invoices, shipments, ASNs, inventory reporting, and purchasing workflows, businesses gain the accuracy and visibility needed to meet growing customer and partner expectations.

Whether coordinating with suppliers, collaborating with 3PLs, or managing high-volume eCommerce activity, TrueCommerce helps eliminate manual tasks by synchronizing data directly with Sage Intacct. Built-in safeguards ensure data is correct before transactions are processed, reducing chargebacks and preventing avoidable delays. The platform also supports multichannel expansion through integrations with leading marketplaces, online storefronts, and API-based retailer systems, helping teams maintain real-time inventory and order accuracy across every channel.

Combined with in-region support, automatic mapping updates, and a scalable architecture, Sage Intacct users gain a reliable, future-ready foundation that helps them work smarter, automate confidently, and grow without added complexity.

### Features at a Glance

- Cloud-based EDI with browser-based access
- Automated integration for sales, fulfillment, and purchasing workflows
- Inbound shipment automation with package-level details
- Built-in validation to ensure accuracy and reduce chargebacks
- Marketplace, storefront, and API integration for multichannel growth
