

# Sage

# Integrated EDI

# for Sage X3

Modern, scalable EDI that unifies sales, purchasing, warehousing, and digital channels

## The Challenge: Disconnected Systems Slow Operations and Limit Visibility

Growing manufacturers, distributors, and retailers often struggle to manage rising transaction volumes across customers, suppliers, 3PLs, and digital channels. As order complexity increases, so does the risk of manual errors, rekeying, delays, and compliance issues. Teams are forced to reconcile data across systems, re-enter orders or shipment details, and chase down updates. When requirements change—like a new marketplace feed or a new customer’s mapping rules—businesses face additional work just to stay compliant.

At the same time, many Sage X3 users need broader integration across marketplaces, storefronts, and warehouse systems, creating even more pressure on workflows that weren’t built for multichannel fulfillment. Without automation, it’s difficult to keep inventory aligned, process updates in real time, and ensure clean, complete data flows end to end. These challenges limit agility and make it harder to scale efficiently—especially when supply chain partners expect faster turnaround, higher accuracy, and seamless digital collaboration.

## Our Solution: A Unified Platform to Streamline Every Sage X3 Workflow

TrueCommerce delivers a cloud-based, fully integrated EDI platform that automates sales, purchasing, warehousing, and multichannel workflows directly within Sage X3. With connectivity to more than **180,000 trading partners**, the solution centralizes EDI, translates and validates every document, and synchronizes data through Sage-native integration. Transaction Manager™ converts raw EDI into readable business documents, supports real-time updates, and applies built-in validation to prevent pricing errors, missing fields, and duplicate order numbers—before transactions post to Sage X3.

The platform also enhances fulfillment and purchasing by automating outbound deliveries, inbound ASNs, PO acknowledgements, invoices, and warehouse communications. Optional 3PL integration creates warehouse shipping orders (940s) from Sage X3, processes inbound 945s with package and item details, and generates compliant ASNs automatically. Beyond EDI, Sage X3 users can connect with 100+ global marketplaces and leading storefronts, enabling real-time order, inventory, and pricing synchronization across Amazon, Shopify, BigCommerce, Adobe Commerce, Walmart, eBay, and more.

## Key Capabilities Include:

Automated sales, purchasing, and warehouse document workflows

Marketplace and storefront integration with real-time data sync

Direct retailer API integration for high-speed, accurate data exchange

Free mapping updates and connectivity to 180,000+ trading partners

Unlimited, in-region support and guided onboarding

Scheduler for hands-free receiving, sending, importing, exporting, and backups

## Integrate Your Entire Supply Chain With Sage X3

TrueCommerce helps Sage X3 users automate every step of their sales, purchasing, warehousing, and digital commerce workflows. By replacing manual data entry and rekeying with fully integrated EDI workflows, businesses can improve accuracy, accelerate order turnaround, and reduce operational strain. The platform integrates seamlessly with Sage X3 to automate key sales processes—including inbound purchase orders, outbound deliveries, invoicing, PO acknowledgements, and automatic customer creation—allowing teams to process transactions quickly and consistently.

Warehouse operations also benefit from automated 940/945 workflows, enabling smoother communication with 3PLs and improved visibility across each shipment's package and item-level details. On the purchasing side, inbound invoices, receipt creation, and order updates

sync directly to Sage X3, eliminating redundant tasks and reducing the risk of discrepancies. As the supply chain becomes more multichannel, Sage X3 users can expand into digital commerce by integrating with leading marketplaces and online storefronts. Automated order import, pricing updates, and real-time inventory sync ensure an accurate, unified customer experience. With API integration, the platform also connects directly to retailers for accelerated data exchange. The result is a unified, scalable solution that helps businesses do more with less and move faster across every channel.

## Why choose TrueCommerce ReplenishAI?

01

### Sales Automation

Reduce manual tasks with automated orders, deliveries, invoices, and PO updates synchronized in real time with Sage X3.

02

### Warehouse Integration

Improve 3PL collaboration with automated 940/945 workflows, package details, and ASN generation.

03

### Purchasing Workflows

Automatically process supplier invoices, receipts, and updates for faster, more accurate procurement.

04

### Marketplace Connectivity

Sync orders, fulfillment, customer details, pricing, and inventory across Amazon, Walmart, eBay, and more.

05

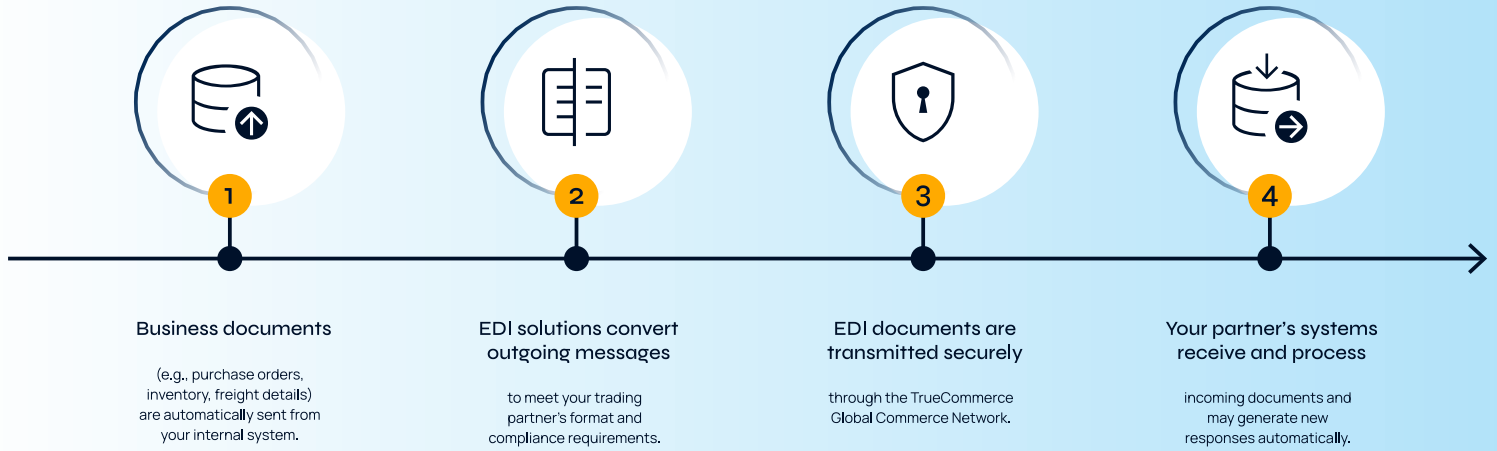

### Storefront Integration

Connect Shopify, WooCommerce, BigCommerce, and Adobe Commerce for unified omnichannel operations.

06

### API-Based Integration

Exchange data in real time with retailer APIs for faster performance, higher accuracy, and fewer manual steps.

TrueCommerce helps Sage X3 users connect their entire supply chain with a modern, cloud-based integration platform built for accuracy, visibility, and speed. By automating essential processes—orders, deliveries, PO acknowledgements, invoices, ASNs, receipts, and warehouse workflows—businesses can reduce manual effort, eliminate errors, and respond quickly to customer and supplier demands.

As digital commerce accelerates, TrueCommerce also provides seamless connectivity to leading marketplaces, storefronts, and API-driven retailer systems. This multichannel flexibility ensures consistent inventory updates, faster order processing, and a more unified customer experience. Combined with free mapping updates, broad trading partner coverage, and unlimited, in-region support, Sage X3 customers gain a scalable foundation built to evolve with their business.

Whether you're automating fulfillment, expanding into new online channels, integrating 3PLs, or modernizing supplier communication, TrueCommerce delivers the tools, technology, and expertise you need to operate more efficiently and grow with confidence.

## Features at a Glance

- End-to-end EDI automation for sales, purchasing, and warehouse workflows
- Integration with 100+ marketplaces and leading storefronts
- Direct API connectivity for real-time, high-speed data exchange
- Free EDI mapping updates and access to 180,000+ trading partners
- Scheduler for automated sending, receiving, importing, exporting, and backups
