EDIFACT/D07A/DESADV : DESADV Despatch advice message

Version: 1.2 Final

Company:
Publication:

LUCID Motors
October 20, 2022

Notes

The Lucid Motors Advanced Ship Notice or ASN (EDIFACT DESADV) is used to transmit details of a shipment delivery arriving at Lucid Motors.

Lucid Motors uses a STPI structure for the ASN. Thus, the structure is as follows:

- SHIPMENT (S) Data that applies to the whole shipment, such as bill of lading number, lading quantity, supplier code, etc.
- TARE (T) Data related to a shipping container, such as a pallet.
- PACK (P) Data related to the package, carton, etc. in which the item is shipped, such as serial numbers.
- ITEM (I) Data related to the product being shipped.

Please note that

- Only the elements and sub-elements that are used in the transaction are present in the guide to improve readability.
- Segments, elements and sub-elements are described as "Used" and "Must use". When they are marked as "Used", they are optional fields; when they are marked as "Must use", they are mandatory fields.

FREQUENCY: Before each shipment arrives at Lucid Motors: **ASN'S MUST BE TRANSMITTED AND RECEIVED BY LUCID WITHIN 15 MINUTES OF THE SHIPMENT LEAVING THE SHIPPER FACILITY. THE RECEIPT OF THE CONTRL IS THE ACCEPTANCE POINT OF THIS TRANSACTION**

TRANSMITTED FROM: Suppliers

TRANSMITTED TO: Lucid Motors

INCLUDED IN THE DESADV:

- Purchase Order/Scheduling Agreement Number
- Purchase Order/Scheduling Agreement Line Number
- Release Number
- Country of Origin
- Part number
- Quantity dispatched
- DSV Load ID.
- Packaging serials for all containers, i.e., cartons, pallets.
- See additional information in Business Rules

BUSINESS RULES - DESADV

- One ASN per Shipment, Ship To and Ship From location
- One ASN per Ocean Container and/or Truck
- Each carton and/or master pallet must only contain one Release Number
- Required on all ASNs:
 - Total carton count for shipment (MEA)
 - Carton Count for pallet (for CP303=3 carton count is in QTY0460, CPS03=1 or 4 carton count is in PAC loop).
 - When QTY is standalone or inner container, the quantity is the part count in the carton. When QTY is in the pallet, then QTY010=52 is Mandatory for every level. When CPS030=1 (inner pack) or 4 (no packaging hierarchy), the value is quantity per pack. When CPS030=3 (pallet), the value is the carton count on the pallet.
 - Part Count for each box
 - A total carton count is required for each 6J and 5J License Plate/Pallet.
 - A carton contains one part number.
 - Purchase Order or Schedule Agreement number
 - PO/SA Line-Item number
 - Release number

- One release number per part in pack and master pallet
- All International ASNs must use the Country-of-Origin segment as the ultimate country of manufacture identifier
- Scheduling Agreement and Purchase Order demand can be mixed on the ASN but each pack and/or master pallet must only contain one Release Number
- All label info to be included in ASN (Part Number, ASN Number, Supplier Number, Master and Carton Label License Plate Serial Numbers, Purchase Order and Schedule Agreement Numbers, Quantity at Master and Carton level, Ship To Address, Ship From Address). Lucid's Label Specification Guide is available on our EDI portal.
- All packaging serials for containers and pallets must be included in ASN to ensure accurate pick pack ship.

Clarification:

- 1/0010 A service segment starting and uniquely identifying a message. The message type code for the Despatch advice message is DESADV. Note: Despatch advice messages conforming to this document must contain the following data in segment UNH, composite S009: Data element 0065 DESADV 0052 D 0054 07A 0051 UN
- 1/0020 A segment for unique identification of the Despatch Advice document, by means of its name and its number.
- 1/0030 Date/time/period related to the whole message. The DTM segment must be specified at least once to identify the Despatch Advice date.
- 1/0050 A segment specifying the weight and volume of the consignment.
- 1/0080 A group of segments giving references where necessary, their dates relating to the whole message, e.g. contract number.
- 1/0090 A segment for referencing documents relating to the whole despatch advice message, e.g. purchase orders, delivery instructions, import/export license.
- 1/0110 A group of segments identifying names, addresses, locations, and required supporting documents relevant to the whole Despatch Advice.
- 1/0120 A segment for identifying names, addresses, and their functions relevant to the whole Despatch Advice. Identification of the parties involved is recommended for the Despatch Advice message, and is to be given in the NAD segment. It is recommended that where possible, only the coded form of the party ID should be specified, e.g. the buyer and seller are known to each other, thus only the coded ID is required. The consignee or delivery address may vary and would have to be clearly specified, preferably in structured format.
- 1/0170 A group of segments to identify the people, functions, departments and appropriate numbers to whom communication should be directed.
- 1/0180 A segment to identify the person, function or department to whom communication should be directed.
- 1/0190 A segment to identify communication types and numbers for the person, function or department identified in the CTA.
- 1/0240 A group of segments specifying details of the mode, means and method of transport and date/time of departure and destination relevant to the whole despatch advice.
- 1/0250 A segment specifying the carriage, and the mode and means of transport of the goods being despatched.
- 1/0310 A group of segments providing information relative to the equipment used for the transportation of goods relevant to the whole despatch advice.
- 1/0320 A segment to define fixed information regarding equipment used in conjunction with the whole despatch advice, and if required, to indicate responsibility for supply of the equipment.
- 2/0390 A group of segments providing details of all package levels and of the individual despatched items contained in the consignment. This segment group provides the capability to give the hierarchical packing relationships. The group defines a logical top-down order structure. The lowest level package information of the hierarchy is followed by the detail product information.
- 2/0400 A segment identifying the sequence in which packing of the consignment occurs, e.g. boxes loaded onto a pallet.
- 2/0430 A group of segments identifying packaging, physical dimensions, marks and numbers, quantities, date and time information, handling information and information about packing at this level.
- 2/0440 A segment specifying the number and type of the packages/physical units and the physical type of packaging for the despatched goods.
- 2/0450 A segment specifying physical measurements of the packages/physical units described in the PAC segment.
- 2/0460 A segment to specify the quantity per package described in the PAC segment.
- 2/0500 A group of segments specifying markings, labels, and packing numbers.
- 2/0510 A segment specifying markings and/or labels used on individual physical units (packages) described in the PAC segment.
- 2/0540 A group of segments to give specific package related identifications and dates.
- 2/0550 To specify a set of related identification numbers.
- 2/0650 A group of segments providing details of the individual despatched items.

- 2/0660 A segment identifying the product being despatched. All other segments in the detail section following the LIN segment refer to that line item.
- 2/0670 A segment providing additional product identification.
- 2/0680 A segment for describing the product being despatched. This segment should be used for products that cannot be identified by a product code or article number.
- 2/0690 A segment specifying physical measurements of the despatched item in original or unpacked form.
- 2/0700 A segment to give quantity information concerning the product.
- 2/0710 A segment indicating that the line item is subject to special conditions due to origin, customs preference, or commercial factors.
- 2/0750 A segment providing date, time information related to the line item, e.g. production date.
- 2/0810 A segment giving monetary amounts required by the consignee to undertake customs clearance procedures.
- 3/1160 A service segment ending a message, giving the total number of segments in the message (including the UNH & UNT) and the control reference number of the message.

Notes:

Release number is mandatory. The AQ qualifier is used to denote the release number which is originally transmitted in the in the ORDERS/ORDCHG/DELJIT RFF segment, qualifier RE. There is one release number per carton and pallet. If multiple release numbers for a single part is shipped, then they must have their own carton and pallet (different serials) which will generate their own CPS/LIN loops. This means the DESADV can have a repeat LIN with the same part number ONLY when multiple release numbers for the same part are shipped in a single shipment. Release number is 19 digits composed of **PO / SA Number + Line-Item number + Release Code**.

The AW qualifier is used to denote the shipping serial, a unique identifier printed on a label. Also known as the License Plate, License Plate Serial, Handling Unit, Container Serial, Mix/Master Pallet Serial, Barcoded Label Serial, Label Serial.

GIR License Plate value construction:

Data Identifier + Self-Determined Fixed Identifier (a location identifier unique to the supplier's business like an ISO Number, Dun's Number, Odette Number, JIPDEC, or Supplier Ship-From location) + **Non-repeating Serial Number** (padded out so entire license plate value meets full 18 characters). This value is printed on your shipping label. Please see the Lucid Label Specification for specific label requirements.

Data Identifiers are: **6J** Master Pallet, **5J** Mixed Pallet, **1J** Carton or box Labels

Example:

6J123456781234567890 (Master pallet)
 5J123456781234567890, Mixed pallet)
 1J123456781234567890 (Single carton or box)
