

# TrueCommerce & Vori Partnership

## Exclusive Trading Partner Marketplace and Connectivity Platform for the Grocery Supply Chain

TrueCommerce provides EDI connectivity and integrations for Vori's app-based, multi-vendor grocery inventory management

### PARTNERSHIP BENEFITS

More Connected. More Supported.  
More Prepared for What's Next.

- Enables secure and reliable EDI communication between grocery retailers and suppliers over a world-class trading partner connectivity platform
- Provides an unparalleled range of proven ERP integrations

## PARTNERSHIP BENEFITS

- Offers integrations with hundreds of digital marketplaces and eCommerce storefronts
- Allows Vori to facilitate critical business transactions between grocery retailers and their suppliers, including purchase orders, invoices, shipping documents, order reconciliation, and inventory updates
- Brings local and regional suppliers, and all suppliers' long tail customers into the digital world through exceptionally priced, yet premier supply chain technology

## BACKGROUND

[Vori](#) is a venture-funded startup, originally launched in 2019 out of East Palo Alto by Stanford Alumni. Its technology platform and digital marketplace replaces pen-and-paper and other fragmented and labor-intensive ordering processes, making it easier than ever for grocery retailers to communicate and transact with suppliers to replenish store inventory across their entire supply chain network.

The inspiration for Vori came from the parents of Vori co-founder and CEO Brandon Hill, who spent their careers in the grocery and [consumer packaged goods \(CPG\)](#) industry. They knew first-hand how these verticals lagged in digital transformation, and how traditional, manual and analog processes held back independent and natural grocers and SMB suppliers trying to compete with industry titans.

"Vori is a marketplace and platform that provides the tools needed to unlock digital transformation within the grocery industry," says Robert Pinkerton, CTO. "We make it possible for grocery store buyers or managers to simply walk their shelves, scan an item, and know which vendor they ordered it from in the past. If the item is out of stock our app helps them discover alternatives at the time of inventory purchase—reducing the time it takes to replenish inventory by up to 80% and improving fill rates."

"We also make it easy for grocers to receive products and reconcile orders from their suppliers within their back-office systems; with Vori, retailers are able to receive against a Vori purchase order or an invoice from the vendor, produce credit requests and integrate their accounts payable systems," Mr. Pinkerton adds. "This helps unlock data insights about what products are trending and supports wall-to-wall inventory management and forecasting as you reorder."

## ENABLING CONNECTIVITY AND AUTOMATION WITH TRUECOMMERCE

How does TrueCommerce connectivity and integration expertise support Vori's mission to become "the modern operating system for the global food supply chain"?

Mr. Pinkerton explains: "We had two needs in a partner. First, we needed a way to provide EDI communication. Second, we needed production quality ERP API integrations between our retailers and suppliers. These two things allow us to facilitate robust, secure and automated transactions like purchase orders, catalog and inventory updates as well as invoices between retailers and suppliers on the Vori platform, so that both parties can get the most accurate information."

TrueCommerce not only gives Vori end-to-end EDI capability, but also [EDI integrations](#) compatible with an exceptional range of ERP/accounting systems that are popular within the grocery supply chain, as well as leading digital marketplaces and [eCommerce platforms](#).

With TrueCommerce technology under the hood, Vori can now offer its customers full-featured collaboration and automation using integrated EDI to connect their business systems.

## MOVING AT STARTUP VELOCITY

Before choosing TrueCommerce as its integration and connectivity partner, Vori's executive team evaluated all major EDI players.

"We were looking for a partner that could move at an early-stage, venture-backed startup's velocity," Mr. Pinkerton shares. "TrueCommerce was willing and able to help us onboard new suppliers and retailers within weeks as opposed to months, and to create this novel web of integrations."

"Typically, an EDI vendor provides a one-to-one connection between retailers and suppliers," clarifies Mr. Pinkerton. "With Vori, it's a multiplex connection where we sit in the middle and facilitate communication between any retailer and any supplier."

This transformation has been happening at startup speed.

"TrueCommerce not only helped us create this novel solution, but also rolled it out in record time," continues Mr. Pinkerton. "They were willing to adapt to the needs of our users' journeys, where Vori owns the customer relationship and TrueCommerce is the integration provider and facilitator. The result has been really valuable to our user base."

TrueCommerce also makes it easy for Vori customers to get started with multi-supplier EDI communications. "Among the main things we were looking for in an EDI integration provider was a seamless onboarding experience for our customers," Mr. Pinkerton comments. "With TrueCommerce, within a few weeks the integrations are implemented, test orders are placed, and they're up and running."

### BETTER VISIBILITY REDUCES OUT OF STOCKS

By facilitating automated, accurate communication, Vori solves multiple problems for [grocery retailers](#) and suppliers.

"Many grocery retailers previously had no access to this world of EDI communication," states Mr. Pinkerton. "Vori gives them a level of order visibility that they didn't have in the past. Now they can quickly get answers to questions like, 'What did I order from that supplier last time?' 'What on my order was left off?' 'What mis-picks were in my order?'"

Vori also lets grocers see what's in stock in the supplier's warehouse, lets them pick alternative products from their preferred suppliers when needed, and discover new products through Vori's universal search. That means more stock on the shelves, leading to increased sales.

"Previously this all would require manual processes like uploading and parsing a .CSV file or exchanging emails, which we all know is not efficient and is often an action taken long after the supplier loses the sale," Mr. Pinkerton relates. "The overall better visibility, traceability and communication in a digital world that you get with Vori and TrueCommerce is the key benefit here."

### MORE DISTRIBUTOR OPTIONS THANKS TO EDI

Besides improving visibility and traceability for ordering, Vori's EDI component opens the door to new business relationships within the grocery supply chain.

"The big players like KeHE and UNFI that require EDI connections won't work with you unless you can speak their language," Mr. Pinkerton stresses. "Through TrueCommerce we enable

our customers to speak that language. Our ability to now bring these mainline vendors and distributors onto the Vori platform makes us a full-store solution for ordering."

"Additionally, many small businesses in the grocery industry have long wanted access to EDI, but for cost or technical reasons it wasn't on their roadmap," Mr. Pinkerton notes. "Vori now makes EDI easy, simple and achievable for them."

### LABOR COST SAVINGS FOR VENDORS AND DISTRIBUTORS

By automating previously ad hoc tasks, the Vori/TrueCommerce solution streamlines order management for vendors and distributors as well as grocery retailers.

"While it's painful for grocery retailers to order products from hundreds of discrete suppliers, it's also painful for the suppliers to receive orders and payments from hundreds of retailers that are not communicating by digital means," contends Mr. Pinkerton. "They're sending emails and faxes, calling the order desk, texting sales reps...the list goes on and on."

With the partnership, the process changes drastically. "Now a distributor can say, 'Hey, all my retailers, get on Vori,' and they can communicate over a single pipe that's effectively automated," Mr. Pinkerton describes. "This really reduces the workload. Rock Island Refrigerated Distributors reports that Vori has cut the order desk call volume and labor requirements by 50%."

### HELPING MOM AND POP SHOPS RISE UP

Independent local grocers and other small and medium-sized businesses (SMBs) in the grocery supply chain face an uphill competitive fight in the era of major omnichannel grocery retailers like Amazon's Whole Foods. Many don't have the margins to invest in cutting-edge IT—if any tools are even available to meet their unique needs.

With Vori comes a technology solution that was not only created especially for the grocery industry, but also has its roots in that same industry.

"Vori is a marketplace and platform that provides the tools needed to unlock digital transformation within the grocery industry. We make it possible for grocery store buyers or managers to simply walk their shelves, scan an item, and know which vendor they ordered it from in the past."

#### Robert Pinkerton

CTO

Vori

"TrueCommerce not only helped us create this novel solution, but also rolled it out in record time. They were willing to adapt to the needs of our users' journeys, where Vori owns the customer relationship and TrueCommerce is the integration provider and facilitator. The result has been really valuable to our user base."

CTO  
Vori

"Vori is a low-cost, easy-to-use, streamlined way for independent and local grocery stores to improve their capabilities," Mr. Pinkerton emphasizes. "We're a facilitator for innovation. Now I can have better eCommerce offerings through my deeper understanding of inventory within my store. I can have the best selection of unique local and regional products that our communities love and thrive on. I can really do the most with my labor force, which is very difficult in this industry."

The data insights in Vori help SMBs find new ways to drive sales and improve margins.

### BUILDING THE BUSINESS

By expanding their offering to include integrated EDI, Vori is already realizing a notable revenue increase, which will only grow along with the platform's transaction volume.

Currently, about 20% of the total order volume on the Vori platform is transacted via TrueCommerce. This percentage is expected to increase significantly over time. "Several dozens" of Vori users are utilizing TrueCommerce-based services today, according to Mr. Pinkerton. These include independent retailers like Berkeley Bowl Marketplace, Rocky's Market and Woodlands Markets, as well as vendors and distributors like KeHE, Sunridge Farms, SF Naturals, and Rock Island.

Partnership with TrueCommerce, whose global network includes over 160,000 pre-connected retailers, distributors, and logistics service providers, means more than revenue gains for Vori and the communities they serve.

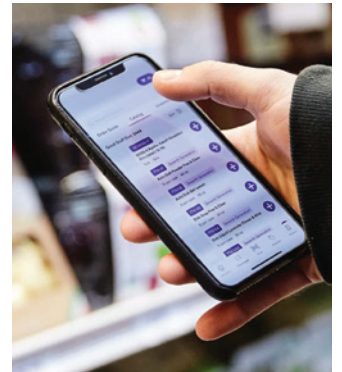

"These connections help unlock the future of Vori," reflects Mr. Pinkerton. "As we're scaling out right now, as we're onboarding these larger distributors, as we're becoming the full-store solution for a lot of our retailers—all this is achievable for us as an early-stage startup because of the TrueCommerce relationship."

The partnership ROI has been both fast and tangible.

"Our investment in TrueCommerce paid for itself as soon as it was live in production and we were able to onboard new customers like KeHE and other large distributors and retailers," Mr. Pinkerton reports. "I recommend TrueCommerce all the time, especially when anyone asks which EDI provider they should look at. They've certainly done a great job for us."

The partnership is also helping both Vori and TrueCommerce expand their food industry ecosystem footprint.

"People want to be able to trust their providers," Mr. Pinkerton observes. "When you're giving over responsibility for something so foundational as communication with your grocery retail customers and your order flow, you need to have a steadfast partner there. Because that is your business at the end of the day."

### ABOUT TRUECOMMERCE

TrueCommerce is the most complete way to integrate your business across the supply chain, integrating everything from EDI to inventory management, to fulfillment, to digital storefronts and marketplaces, to your business system and to whatever comes next. That's why thousands of companies across various industries rely on us.
